|----------|-------------------------------|----------|
| 1 | Installation | 3 |
| 2 | Usage | 5 |
| 3 | Additional Information | 7 |

django-sendgrid is the easiest way to send e-mail with SendGrid. It uses the SendGrid SMTP API, as recommended. Although it's rather simple to use, a example project is included to demonstrate usage.

Installation

To install with PyPi:

```
pip install django-sendgrid
```

Usage

Add `sendgrid` to your `INSTALLED_APPS`:

```
INSTALLED_APPS = (  
    # Existing apps  
    "sendgrid",  
)
```

Add the following to your settings:

```
SENDGRID_EMAIL_HOST = "smtp.sendgrid.net"  
SENDGRID_EMAIL_PORT = 587  
SENDGRID_EMAIL_USERNAME = "your_sendgrid_username"  
SENDGRID_EMAIL_PASSWORD = "your_sendgrid_password"
```

The API is similar to that of Django's; create a `SendGridEmailMessage` and send it:

```
>>> from sendgrid.message import SendGridEmailMessage  
>>> email = SendGridEmailMessage('Subject', 'Body', 'ryan@ryanbalfanz.net', ['ryan@ryanbalfanz.net'])  
>>> email.send()
```
